Brief

You are going to build your **personal CV / resume** as a single HTML page. No CSS. No JavaScript. Just HTML.

The goal is not to make it pretty — that comes in the CSS lesson. The goal is to **practise structuring real content with the right HTML elements**. By the end of this assignment, you should be comfortable picking the correct tag for any piece of information.

You will hand this in as raw HTML. We are grading the **structure, not the styling**.

Why this assignment

A CV is the perfect HTML exercise because it has every kind of content you'll meet on real websites:

- Headings of different levels
- Paragraphs of text
- Lists (your skills, your education, your hobbies)
- A table (work experience often fits well here)
- Links (your email, LinkedIn, GitHub)
- An image (your profile picture)
- Sections that need to be grouped semantically (header, main, footer)

If you can build a CV in clean HTML, you can build any text-heavy webpage.

What your CV must include

You must include **all** of the following sections. Use realistic content — this is genuinely a CV you could use later, so put real information.

1. A clear page setup

- Proper HTML5 boilerplate (`<!DOCTYPE html>` , `<html lang="en">` , `<head>` , `<body>`)
- A `<title>` that says something like `"Tinashe Matanda — CV"`
- A `<meta charset="UTF-8">`
- A `<meta name="description">` describing the page

2. A header section

- Your full name as the **main page heading** (`<h1>`)
- Your professional title or tagline (e.g. *"Cybersecurity Analyst"*) — pick the right tag for a sub-line
- A profile image (`<img>`) with a meaningful `alt` attribute. If you don't want to use a real photo, use a placeholder — but the tag must be there.

3. Contact info

- Your email as a clickable link using `<a href="mailto:...">`
- A link to your LinkedIn or GitHub (or both) — open in a new tab using `target="_blank"`
- Your location (city, country)

4. About me / Personal summary

- A short paragraph (3–5 sentences) introducing yourself
- Use `<strong>` and `<em>` at least once each, where it makes sense in the text

5. Skills

- An **unordered list** of your skills
- A **nested list** somewhere — e.g. group skills by category (Technical / Soft skills / Languages)

6. Education

- An **ordered list** of qualifications, starting with the most recent
- Use the `type` attribute to make it letters or roman numerals if you want to be fancy

7. Work experience — as a TABLE

- Use a `<table>` with `<thead>` , `<tbody>`
- Columns: Year, Role, Company, Key responsibilities
- At least two rows of experience (real or aspirational — if you're new to work, include internships, school projects, or even your bootcamp)

8. Hobbies / Interests

- Any list type you like
- At least one item should use a custom marker style or letter type — show off what you learnt about lists

9. References

- A short section saying *"References available on request"* OR
- A small list of references with names and contact info

10. A footer

- Use `<footer>`
- Include a copyright line: `© 2026 Your Name`
- Include a small note: *"Built with HTML as part of the Zaio Cybersecurity Bootcamp."*

Required HTML elements checklist

By the time you submit, your file MUST contain at least one of every element in this list. Tick them off as you go:

- [ ] `<!DOCTYPE html>`
- [ ] `<html lang="en">`
- [ ] `<head>` with `<title>`, `<meta charset>`, `<meta description>`
- [ ] `<body>`
- [ ] `<header>`
- [ ] `<main>`
- [ ] `<footer>`
- [ ] `<section>` (use this to wrap each major part of your CV)
- [ ] `<h1>` (only ONE per page — your name)
- [ ] `<h2>`, `<h3>` (for sub-sections)
- [ ] `<p>`
- [ ] `<strong>` and `<em>`
- [ ] `<ul>` with `<li>`
- [ ] `<ol>` with `<li>`
- [ ] A **nested list** (a list inside another list)
- [ ] `<table>` with `<thead>`, `<tbody>`, `<tr>`, `<th>`, `<td>`
- [ ] `<a>` with `href` (at least one `mailto:` link and one external link)
- [ ] `<img>` with `src` and `alt`
- [ ] `<hr>` somewhere meaningful (e.g. between sections)
- [ ] `<br>` somewhere meaningful (use sparingly)

Rules

1. **No CSS, no JavaScript.** This is an HTML assignment. We are looking at structure. If you've been playing with CSS already, save it for the next lesson.
2. **Indent your code properly.** Two spaces per level of nesting. Messy indentation costs marks.
3. **Use semantic tags, not just `<div>` everywhere.** If a `<section>`, `<header>`, `<nav>`, or `<article>` fits — use it.
4. **Every `<img>` must have a meaningful `alt` attribute.** Not "image" — describe what's actually shown.
5. **Test your page with Live Server before submitting.** If it doesn't render, it doesn't get graded.
6. **No AI-generated HTML.** You may use AI to help you understand a concept, but the final code must be written by you. We will recognise generic AI output and it will hurt your grade. If something is generated, you should at minimum understand and be able to explain every line.
7. **Real content.** Don't just write "lorem ipsum". Use actual information about yourself.

How to submit

Submit your file via Google Classroom by the due date.

- File name: `firstname-lastname-cv.html` (e.g. `tinashe-matanda-cv.html`)
- If you include an image folder, zip the whole thing and submit `firstname-lastname-cv.zip`

Stretch goals (no extra marks, just for your own growth)

If you finish early and want a challenge:

- Add a "Projects" section as a second `<table>`
- Add a `<details>` and `<summary>` block for a collapsible section (look this up — it's pure HTML, no JS needed)
- Add anchor links — a "table of contents" at the top that jumps to each section using `id` attributes and `<a href="#section-id">`
- Validate your HTML at https://validator.w3.org and fix any warnings

---

Rubric — How you will be graded

Total: **100 marks**

Category	Marks	What we're looking for
Boilerplate & document structure	10	Correct DOCTYPE, html with lang, head with title and metas, body. File loads cleanly in Live Server.
Semantic structure	15	Proper use of `<header>`, `<main>`, `<footer>`, `<section>`. Not just `<div>` everywhere. Each major part of the CV is clearly grouped.
Headings hierarchy	10	Exactly one `<h1>`. `<h2>` for sections, `<h3>` for sub-sections. No skipped levels (e.g. h1 jumping straight to h4).
Lists used correctly	15	Both `<ul>` and `<ol>` used appropriately. Nested list is correctly placed inside an `<li>` (not as a sibling). At least one custom list type or marker.
Table for work experience	15	Uses `<thead>` and `<tbody>`. Has `<th>` for headers, `<td>` for data. Cells line up — no broken rows. At least two experience entries.
Links & images	10	At least one `mailto:` link. At least one external link with `target="_blank"`. All images have meaningful `alt` text. No broken links or missing images.
Text formatting	5	`<strong>` and `<em>` used where they actually make sense in the content — not sprinkled randomly.
Content completeness	10	All 10 required sections are present. Content is realistic and personal, not placeholder text.
Code quality	10	Clean, consistent two-space indentation. No tags left unclosed. Logical ordering of elements. Reads cleanly top to bottom.

Grading bands

Mark	Band	What it means
85–100	Excellent	Production-ready structure. Clean semantics. Could be styled tomorrow and shipped.
70–84	Good	All requirements met. Minor issues with semantics, indentation, or completeness.
55–69	Pass	Most requirements met but several elements missing or used incorrectly. Structure works but has clear flaws.

Mark	Band	What it means
40–54	Below pass	Page renders but is missing several required elements or uses tags incorrectly.
Below 40	Fail	Doesn't render, missing major sections, or shows fundamental misunderstanding of HTML structure.

A final note

This is the first assignment where you'll see your code render as a real webpage you could send to someone. **It will look ugly.** That's fine — that's the whole point. We're proving that structure is separate from style.

When we cover CSS in the next module, you'll bring this same CV back and transform it. The same HTML you write today will become a polished, professional-looking page tomorrow with nothing more than a stylesheet.

So focus on getting the bones right.

Good luck — and remember to test in Live Server early and often.

— Tinashe Matanda
